Who we are, in brief

An IT solutions provider for the Arab world: building its own software, and running technology for others.

Next Tech Corporation (NXT) is an IT solutions provider for the Arab world. We do two things, and each makes the other better: we build our own enterprise software, and we deliver the IT services organizations need to plan, build, and run the technology they depend on.

Our products are built for this region. **NextEAM** is our enterprise asset-management platform; **ICCC** is our Integrated & Intelligent Command Control Center, delivered as a service. Running them ourselves keeps us honest about what it takes to ship and support an enterprise system for years.

Around them, we provide the full range of IT services: tailored software, infrastructure, data and AI, business process outsourcing, dedicated teams, and managed services. Come to us for a single project, a team, or the whole journey.

And we stay with you. We work as a long-term partner, not a one-off vendor, still there when the system has to perform on an ordinary day, not just on launch day.

Beyond Innovation. Into Transformation.

SUPPORT **24/7 managed**

An IT partner that builds its own software

We help organizations across the region get technology built and running, and because we run our own SaaS platforms, we know what that takes.

Next Tech Corporation is an IT solutions provider. We cover the full range, custom software, IT infrastructure, data and AI, outsourcing, and managed services, and we build our own products, **NextEAM** and **ICCC**.

That mix is deliberate. Running our own software keeps us honest about what it really takes to build and support an enterprise system. So when we advise you, it comes from work we do ourselves, not from a slide.

We work close to our clients, across the Arab world, and we stay accountable for the outcome long after go-live, not just through to handover.

One partner, end to end.

WHAT SETS US APART

We advise and we build

Consulting grounded in products we operate ourselves, so our advice stays practical and honest.

Global standards, local know-how

International practice, applied by people who understand the region's rules and realities.

Judged on outcomes

We measure success by whether a system gets used and holds up, and stay accountable for it.

WHERE WE WORK Across the Arab world, with offices in **Riyadh** and **Cairo**. Much of our work supports national priorities like **Saudi Vision 2030**, from digital government and smart cities to data centers and critical infrastructure.

Vision, mission & values

What we are working toward, and how we choose to work.

VISION

To be the Arab world's most trusted partner for building and running enterprise technology.

MISSION

We build our own enterprise software and deliver the services to plan, build, and run the systems organizations depend on, close to our clients, and accountable for the outcome.

Ownership

We run what we build, so our advice is grounded in real operations and we feel the consequences of our own decisions.

Trust

Security, privacy, and straight answers come first. We'd rather raise something inconvenient early than discover it later.

Partnership

We work as an extension of your team, close to where you are, for as long as you need us.

Outcomes

We're judged on whether the work gets used and holds up in production, not on how much we shipped.

Two arms, one team

We bring our own products and our services together, so you can get a system built, run it, or both.

OUR PRODUCTS

Enterprise SaaS we build and operate ourselves.

NextEAM

- Enterprise asset management for asset-heavy operators: work orders, maintenance, parts, and compliance in one place, with AI built in.

ICCC

- An Integrated & Intelligent Command Control Center, delivered as a service: one live operating picture across your systems.

Region-ready by design

- Full Arabic and English with Hijri dates, and hosting in-Kingdom where the rules require it.

OUR SERVICES

The IT services to plan, build, and run technology.

Tailored software & infrastructure

- Custom builds, and the cloud or on-prem platforms to run them.

Data, AI & digital transformation

- Strong data foundations, insight, and AI that earns its place.

BPO, outsourcing & managed services

- We run the work, and keep it running, to clear SLAs.

HOW WE ENGAGE

Project

A defined outcome, to an agreed scope and timeline.

Dedicated team

A team that works as an extension of yours.

Managed & ongoing

We run, support, and keep improving after go-live.

What we deliver

From custom software and infrastructure to data, AI, outsourcing, and managed services.

Tailored enterprise software

Off-the-shelf rarely fits a real operation. We build software around how your organization actually works, then support it for the long run.

- Custom web & mobile apps
- Workflow automation
- System integration & APIs
- Legacy modernization

IT infrastructure consulting

The wrong infrastructure quietly costs you for years. We plan, design, and right-size what your business runs on, and make the trade-offs clear up front.

- Cloud & hybrid architecture
- Networking & security
- Migration & modernization
- Cost & performance

Digitalization & transformation

Most transformation stalls at adoption. We turn paper-heavy, manual processes into digital systems your teams will actually use, and stay until the change sticks.

- Process digitalization
- Roadmaps & business cases
- Operating model & change
- Enablement & adoption

Data & AI solutions

Data is only useful when people trust it and act on it. We build the foundations first, then add AI where it changes a real outcome, with the right guardrails.

- Data platforms & engineering
- AI assistants & automation
- Analytics, BI & dashboards
- Responsible-AI governance

What we deliver

Whatever you need built or kept running, we can cover it end to end.

Business process outsourcing

Some processes drain your team without moving the business. Hand them to us and we'll run them to agreed service levels, with the reporting to prove it.

- Back-office operations
- Finance & HR processes
- Customer & support ops
- Quality & SLA reporting

Outsourcing & dedicated teams

Hiring takes time you don't always have. We give you vetted engineers and specialists who work as an extension of your team, for as long as you need.

- Dedicated delivery teams
- Specialist & niche skills
- Staff augmentation
- Onshore & nearshore

Managed services

Systems need looking after every day, not just on launch day. We run, monitor, and improve yours, with clear ownership of uptime and security.

- Application & cloud ops
- Patching, backup & recovery
- 24/7 monitoring & support
- Security operations

Engagement models

Work with us the way that suits you, from a fixed-scope project to a dedicated team or a fully managed service.

- Project: fixed scope
- Managed & ongoing
- Dedicated team
- Start with an assessment

NextEAM: asset management, built for the region

If your business runs on physical assets, downtime is what hurts. NextEAM keeps work orders, maintenance, parts, and compliance in one place, with AI that catches problems early. Run it as SaaS, in your own cloud, or fully on-prem.

Up to 25%

less unplanned downtime

Up to 65%

planned vs. reactive

< 25 days

to deploy

100%

KSA data residency

Work orders

Raise, assign, and track maintenance from the first request to sign-off.

Preventive maintenance

Schedule by time, meter reading, or condition.

Assets & hierarchy

One place for every asset, where it is, and its full history.

Inventory & parts

Track spare parts and stock across all your sites.

Reporting & BI

Dashboards that turn the day-to-day into something you can act on.

Training & safety

Track competencies, certifications, and safety sign-offs.

AI built in, deploy your way

Practical AI where it earns its place, and the freedom to run it wherever your rules require.

Tenant-scoped assistant

An assistant that only ever sees your organization's data, so answers stay private.

Work-order triage

Suggests priority, the right asset, and who should take it, with citations.

Asset-health scoring

Condition signals combine into a score that warns you before an asset fails.

PM recommendations

Maintenance intervals based on real usage and history, not a guess.

DEPLOY YOUR WAY

- SaaS: we host and run it for you
- Private cloud: your own account
- On-premise: on your servers

OPEN WOS
47

OVERDUE
3

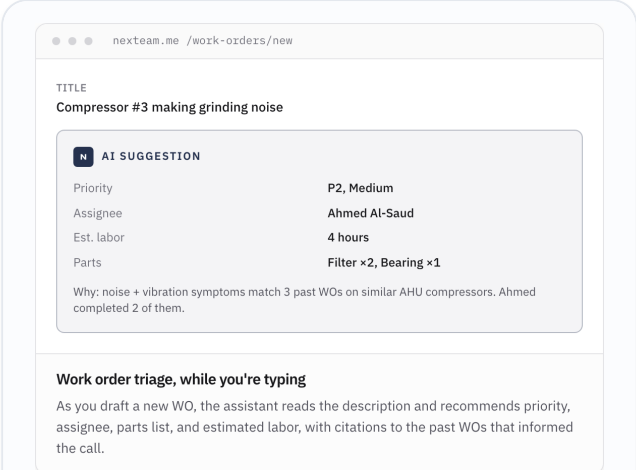

AI INSIGHT ILLUSTRATIVE
Chiller Unit B 02 health declined 14% this week. Recommended: schedule inspection within 7 days.

WO 001284 **Replace bearings** **High**

WO 001283 **Pump inspection** **Medium**

Operations Center

Assets, open work orders, overdue items, and AI insights at a glance.

nextteam.me /work-orders/new

TITLE
Compressor #3 making grinding noise

AI SUGGESTION

Priority	P2, Medium
Assignee	Ahmed Al-Saud
Est. labor	4 hours
Parts	Filter x2, Bearing x1

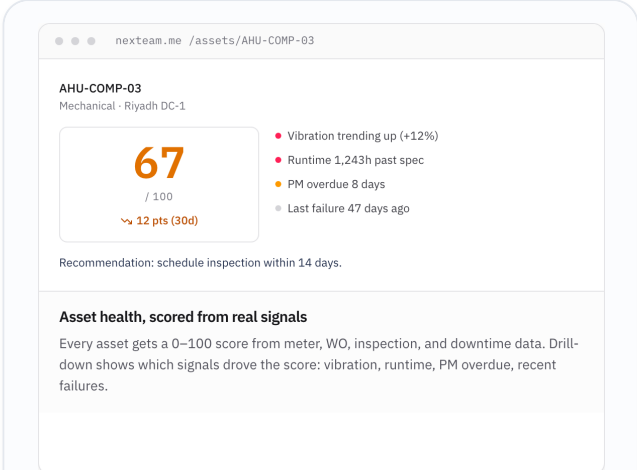

Why: noise + vibration symptoms match 3 past WOs on similar AHU compressors. Ahmed completed 2 of them.

Work order triage, while you're typing

As you draft a new WO, the assistant reads the description and recommends priority, assignee, parts list, and estimated labor, with citations to the past WOs that informed the call.

Work-order triage

The assistant suggests priority and assignment as a request comes in, with citations to past work.

nextteam.me /assets/AHU-COMP-03

AHU-COMP-03
Mechanical - Riyadh DC-1

67
/ 100
12 pts (30d)

- Vibration trending up (+12%)
- Runtime 1,243h past spec
- PM overdue 8 days
- Last failure 47 days ago

Recommendation: schedule inspection within 14 days.

Asset health, scored from real signals

Every asset gets a 0–100 score from meter, WO, inspection, and downtime data. Drill-down shows which signals drove the score: vibration, runtime, PM overdue, recent failures.

Asset health

A health score and the signals behind it, so you act before a failure rather than after.

ICCC: Integrated & Intelligent Command Control Center

Delivered as a service. ICCC pulls your sensors, cameras, and systems into one live picture, and adds AI to help operators spot what matters and act fast, without building a command center from scratch.

One live operating picture

Every sensor, camera, and system in a single live view, instead of a wall of disconnected screens.

CCTV, IoT & system integration

Integrate the sources you already run, old and new, into one platform.

AI alerts, anomaly detection & prediction

Early warnings that surface what matters, not just dashboards that report after the fact.

Incident management & response

Workflows that turn an alert into coordinated, accountable action.

Multi-agency coordination

Keep teams and agencies working from the same picture, in real time.

Dashboards & after-action reporting

Learn from every event with clear reporting and review.

Built on platforms you trust

We partner with the world's leading technology providers, so we can build on whatever fits you best, and you're never locked into one vendor.

Cloud & hyperscale

AWS, Microsoft, Google, and SCCC for cloud, data, and infrastructure at scale, including in-Kingdom options.

Enterprise & AI

IBM for enterprise systems; OpenAI and Anthropic for applied AI built on models you can trust.

Vendor-neutral by design

We stay vendor-neutral across all of them, and recommend what fits you, with a single point of contact.

Industries we know well

We work where uptime, security, and compliance carry real weight.

Government & public sector

Modernize citizen services and core infrastructure while meeting the rules on governance and where data lives.

Energy, utilities & oil/gas

Keep distributed, asset-heavy operations running safely and predictably, with less unplanned downtime.

Manufacturing & transport

Keep production and logistics moving with systems that actually talk to each other, plant floor to back office.

Financial services & healthcare

Move at the pace of a digital business without giving up on security, compliance, or uptime.

Data centers & critical infrastructure

Keep mission-critical facilities available, monitored, and secure around the clock.

Smart cities

Bring city and public-sector operations into one view, with command and control behind it.

Our approach

A clear path from goal to a running system, with security checked at every step. We keep the work visible and the decisions yours.

01

Assess

We get clear on the goal, what's in the way, and where you stand today.

DELIVERABLE

A read on your current state and the biggest opportunities

02

Design

We shape the solution and the plan, and prove the risky parts early.

DELIVERABLE

Architecture, a roadmap, and a working proof where it counts

03

Build

We deliver it, with security checked at every step.

DELIVERABLE

A production rollout, with change control and sign-off

04

Run

We operate, support, and keep improving it after go-live.

DELIVERABLE

Managed services, clear SLAs, and a clean handover

GOVERNANCE Security is checked at every step, with change control, sign-off, and a clean handover whenever you want one.

Built secure, by design

Security is built into how we design, build, and run, and shaped by the standards this region cares about.

NCA ECC aligned

Aligned to the Essential Cybersecurity Controls and KSA regulatory expectations.

PDPL & data governance

Built for the Personal Data Protection Law and sound, transparent data handling.

ISO 27001 practices

Engineered to ISO 27001, with OWASP and CIS as working references.

Data residency

Hosting options including fully in-Kingdom where the rules require it.

Access & audit by design

Role-based access, audit trails, and tenant isolation across everything we run.

Secure by default

Security is built into how we design, build, and operate, not bolted on at the end.

The case for working with us

A partner that builds its own software, knows the region, and stays accountable for the outcome.

We build and we run

We operate our own enterprise software, so our advice is grounded in real systems we maintain, not slides.

Region-ready by design

Full Arabic and English, Hijri dates, and hosting in-Kingdom, built for how the region actually works.

Vendor-neutral

We work across all the major platforms, and recommend what fits you, never locked to one stack.

Accountable for outcomes

We measure success by whether a system gets used and holds up, and stay on long after go-live.

Secure by design

NCA ECC, PDPL, and ISO 27001 practices built into how we design, build, and operate.

One partner, end to end

Strategy, build, and run under one roof, with a single point of contact for the whole journey.
